

Void Dominion Current Game Reference

This is the all-in-one current-state document for Void Dominion. It combines the active rulebook with the live CSV data used by the prototype, asset generator, and simulator.

Active Rulebook

Void Dominion Rulebook v0.3

Overview

Void Dominion is a competitive strategy game of fleet combat, spatial control, and timed scoring.

Players expand across a dense 15-sector nebula map, fight for dominion over planetary systems, hold sector flags, and score through rotating public objectives and system bonus tokens.

Victory comes from:

- establishing dominion over planets and moons
- completing systems
- holding sector flags at end game
- timing your position against upcoming objectives

Players

3 players for the current map configuration.

Core Concepts

- Sectors: spaces on the board for movement, combat, systems, and sector flags.
- Systems: a planet and its moons.
- Surfaces: individual planets or moons. Each surface has a fixed number of square colony slots.
- Presence: a player is present on a surface if they have at least 1 colony cube or their Outpost cube there. A player is present in an asteroid or blank sector if they have at least 1 ship there.
- Dominion: a player has dominion over a surface if their colony value on that surface is strictly greater than each other player's colony value there. Ties mean no player has dominion.
- Outpost cube: a special player cube that occupies 1 colony slot but counts as 2 colony value for presence and dominion.
- Sector flag: a player holds the flag of a sector if they have ships there and no other player has ships there. Each sector can have only one flag. A flag is lost only when another player fulfills that uncontested condition in the sector.
- Objectives: public scoring cards that slide over time.
- System tokens: bonuses gained by having dominion over all surfaces in a system.

Components

Each player has:

- 2 Interceptors
- 1 Settler
- 1 Destroyer
- 1 Outpost cube, distinct from colony cubes
- Colony cubes
- Action pawns
- A turn-order pawn
- Multiple sector flag markers in that player's color

Shared components:

- 15-sector nebula map
- Action board
- Objective deck
- Utility tokens
- System bonus tokens
- Dice
- VP track

See ``data/components.csv`` and ``rules/CURRENT_GAME_REFERENCE.md`` for the current practical prototype component list.

Setup

1. Use the 15-sector nebula map from ``data/map_sectors.csv``.
2. Each player starts in their corner homeworld sector:
 - P1: North Homeworld
 - P2: Southwest Homeworld
 - P3: Southeast Homeworld
3. Place each player's starting ships in their home sector.
4. Each player places 1 colony cube on their homeworld planet.
5. Each player places their sector flag on their homeworld sector.
6. Assemble the objective deck: shuffle 3 early, 3 mid, and 3 late cards together, for 9 cards total. Reveal 3 public objectives.
7. Assign each system its listed system token.
8. Randomize turn order.

Round Structure

Each round has three phases:

1. Placement Phase: players place action pawns in turn order.
2. Resolution Phase: resolve rows A -> E.
3. End Phase:
 - Award and return system tokens based on full system dominion.

- Score the leftmost public objective if scoring is active.
- Discard the scored objective, slide the others left, and refill the rightmost slot.
- Update turn order.

Round Limit

The game lasts 11 rounds. Rounds 1 and 2 have no scoring; objectives slide into position. Scoring begins on round 3 and continues through round 11, for a total of 9 scored objectives.

Ships

Ship	Attack	Health	Colonize
---	---	---	---
Interceptor	1	1	1
Settler	0	2	3
Destroyer	2	2	0

Building Ships

- Ships are built in the acting player's homeworld sector.
- If the player has placed their Outpost cube, they may instead build ships in the sector containing their Outpost cube.

Outpost Cube

- Each player has 1 Outpost cube, distinct from their colony cubes.
- When resolving a Colonize action, the player may spend 1 colonize value to place their Outpost cube onto an empty colony slot in the activated sector instead of placing a regular colony cube.
- A player may only have 1 Outpost cube on the board at a time.
- The Outpost cube occupies 1 colony slot.
- The Outpost cube counts as 2 colony value for presence and dominion.
- The Outpost cube serves as a second build location: ships may be built in the sector containing the player's Outpost cube.
- When removed, the Outpost cube returns to its owner and may be placed again on a future Colonize action.

Removing Outposts

- An Outpost cube is removed if it receives 2 bombardment hits in the same combat.
- An enemy may spend 2 colonize value during a Colonize action to remove an Outpost cube on the activated surface.
- Removing an Outpost by colonization frees its slot but does not automatically place an enemy cube there.
- To remove an enemy Outpost and then place your own cube in that slot during the same Colonize action costs 3 colonize value total: 2 to remove the Outpost, then 1 to place your cube.

Sector Flags

- A player holds a sector flag when they have ships in that sector and no other player has ships there.
- Each player begins the game with their flag on their homeworld sector.
- Each player has multiple player-colored sector flag markers.
- Each sector can have only one flag in it at a time.
- Sector flags update immediately after any action or combat changes ship presence in a sector.
- If a sector becomes empty or contested, the existing flag remains.

- A flag is lost only when another player fulfills the uncontested ship-presence condition in that sector.
- Flags have no in-game effect but are worth VP at end game and can be scored by objectives.

Asteroid Sectors

- Asteroid sectors act as movement corridors.
- Ships in an asteroid sector may not use the Retreat die in combat.

Action Board

Build

Available spaces:

- Build 3 Interceptors
- Build 2 Destroyers
- Build 2 Settlers
- Build 2 Interceptors
- Build 1 Destroyer
- Build 1 Settler

Build places the listed ships in the acting player's build location: homeworld sector or Outpost cube sector.

Move

Available spaces:

- Move 6
- Move 5
- Move 4
- Move 3
- Move 2
- Move 2

Each move value is the number of move actions granted by that space.

For each move action, move 1 ship to an adjacent sector.

Combat

Available spaces:

- Combat +2 dice
- Combat +1 die
- Combat +1 die
- Combat
- Combat

To resolve Combat:

1. Activate a sector where you have ships.
2. Choose one opposing player in that sector as defender.
3. Only attacker and chosen defender participate.

Combat Dice

Attacker may choose one die type for each ship die:

Standard Attack Die:

- 2 hits
- 1 hit
- 1 hit
- 1 hit
- miss
- miss

Spicy Attack Die:

- 3 hits
- 2 hits
- 1 hit
- miss
- miss
- 2 self-hits

Bombardment Die:

- 2 bombard
- 1 bombard
- 1 bombard
- miss
- miss
- miss

Defender may choose one die type for each ship die:

Aggressive Defense Die:

- 2 hits
- 1 hit
- 1 hit
- miss
- miss
- miss

Retreat Die:

- retreat
- retreat
- retreat
- retreat
- miss
- miss

The Retreat die may not be used in asteroid sectors.

Combat Resolution Order

1. Resolve retreat dice.
2. Resolve attacker dice.
3. Resolve defender dice.
4. Resolve self-damage.
5. Remove destroyed ships.

Bombard

- Each bombard result removes 1 enemy colony cube from a planet or moon in the activated sector.
- The attacker chooses which enemy cubes are removed by bombardment.
- 2 bombard results in the same combat may instead remove an enemy Outpost cube.

Colonize

Available spaces:

- Colonize +2 cubes
- Colonize +1 cube
- Colonize +1 cube
- Colonize
- Colonize

To resolve Colonize:

1. Activate one sector.
2. Add colonize values from all your ships in that sector.
3. Add action bonus cubes if applicable.
4. Spend colonize value in that sector:
 - spend 1 to place 1 colony cube in an empty slot
 - spend 1 to remove 1 enemy colony cube from a surface
 - spend 1 to place your Outpost cube in an empty slot
 - spend 2 to remove an enemy Outpost cube from a surface
5. Multiple players may have cubes on the same surface.
6. A surface's dominant player is the one with the highest colony value on it.
7. Tied surfaces have no dominant player.

8. Cubes can only be placed into empty slots; excess value is lost.

Asteroid and blank sectors cannot be colonized.

Colony Slots

- Planets have 2-5 square colony slots.
- Current prototype mapping:
 - Homeworld and low planets: 2 slots
 - VP 2 legacy planets: 3 slots
 - VP 3 legacy planets: 4 slots
 - Center planet: 5 slots
- Each moon has 1 colony slot.
- A surface cannot hold more cubes/outposts than its slot count.
- The Outpost cube occupies 1 slot but counts as 2 colony value.

Utility

Available spaces:

- 4 utility pawn spaces

Utility choices:

- 1 initiative square
- 3 rotating utility token squares

Rotating utility tokens:

- Extra Combat
- Extra Move: perform 4 move actions
- Extra Colonize
- Build 2 Interceptors
- Swap Objectives

Initiative: move yourself to the front of next round's turn order.

Swap Objectives: swap the currently active leftmost objective with either of the other two face-up objectives. The swapped-in objective scores this round.

System Tokens

Each system has a token with an icon.

Gaining Tokens

At end of round, if you have dominion over all surfaces in a system, take its token.

Losing Tokens

At end of round, if you no longer have dominion over all surfaces in a system whose token you hold, return that token.

Token Types

- VP: gain VP at end of round.
- ATTACK: add +1 die to one combat.
- MOVE: gain +2 move actions when taking a Move action.
- COLONIZE: add +1 cube to one Colonize action.
- INTERCEPTOR: gain 1 interceptor when taking a Build action.
- REROLL: reroll any number of combat dice once.
- ACTION: have 1 extra action pawn.

Objectives

- There are 3 face-up public objectives.
- Public objectives are inclusive, not winner-take-all.
- Some objectives score dominion, meaning strictly highest colony value on the relevant planet or moon.
- Some objectives score presence, meaning at least 1 colony cube or Outpost on a surface, or at least 1 ship in the relevant sector.
- Some objectives score sector flags.
- At end of round, the leftmost objective scores, then discards.
- Remaining objectives slide left.
- Draw a new objective into the rightmost slot.
- The first 2 rounds have no scoring so objectives can slide into position before live scoring starts.

Scoring

- Objectives score immediately when they reach the active slot.
- System tokens score or apply during the end phase unless their text says otherwise.
- Moons score at game end.
- Sector flags score at game end.
- Homeworld dominion scores at game end.

End Game

The game ends after round 11.

Final scoring:

- Moon VP values
- Sector flag VP values
- 2 VP if you have dominion over your homeworld planet

Highest VP wins.

No Elimination

If a player loses all ships, they can continue building from their homeworld on their next Build action.

Future Systems

- Ascension instant win
- VP bidding
- Expanded system tokens
- Homeworld system bonuses

Prototype Notes

- The simulation uses simple automated decision rules when exact player choices are not scripted.
- `data/map\_sectors.csv` is the source of truth for the current 15-sector nebula map.
- Some system token effects are represented in data before their full tactical timing is automated.
- The current map has 3 asteroid sectors and 1 blank sector.

Ship Reference

Ship	Attack	Health	Colonize
interceptor	1	1	1
settler	0	2	3
destroyer	2	2	0

Prototype Component List

Category	Component	Count	Status	Asset Status	Notes
Player pieces	Interceptor ships	12 per player	Needed	Generated as individual ship token PNGs	Practical prototype count; each player starts with 2
Player pieces	Settler ships	8 per player	Needed	Generated as individual ship token PNGs plus damaged variants	Practical prototype count; each player starts with 1
Player pieces	Destroyer ships	8 per player	Needed	Generated as individual ship token PNGs plus damaged variants	Practical prototype count; each player starts with 1
Player pieces	Colony cubes	20 per player	Needed	Use physical cubes or TTS built-in cubes	Regular cubes placed on surface slots
Player pieces	Outpost cube	1 per player	Needed	Use tall cube or TTS built-in block	Counts as 2 dominion value while occupying 1 slot
Player pieces	Action pawns	6 per player	Needed	Use physical pawns or TTS built-in pawns	Five normal action pawns plus room for extra action pawn effect
Player pieces	Turn order pawn	1 per player	Needed	Use physical pawn or TTS built-in marker	Tracks turn order
Player pieces	Sector flag markers	15 per player	Needed	Generated as individual player-colored flag PNGs	Each sector can hold one flag total
Player pieces	VP marker	1 per player	Needed	Use physical marker or TTS built-in marker	For VP track
Shared board	Main map board	1	Supplied	Generated as boards/map_board.png	15-sector nebula map
Shared board	Action board	1	Supplied	Generated as boards/action_board.png	Named rows with grouped utility choice area
Cards	Objective cards	21	Supplied	Generated as cards/objective_deck.png	Each game uses 3 early + 3 mid + 3 late
Cards	Objective card back	1	Supplied	Generated as cards/objective_card_back.png	Objective deck back image
Reference	Ship reference	1	Supplied	Generated as cards/ship_reference.png	Ship stats reference
Cards	System bonus cards	8	Supplied	Generated as cards/system_bonus_cards.png	Reminder cards for active assigned system bonuses
Tokens	Utility tokens	5	Supplied	Generated as individual utility token PNGs	Five rotating utility tokens; initiative is printed on the action board
Dice	Custom combat dice	Practical 6 per die type	Supplied	Generated as dice/dice_*.png	Standard Attack Spicy Attack Bombardment Aggressive Defense Retreat
Reference	Dice reference	1	Supplied	Generated as cards/dice_reference.png	Shows combat die faces and icon meanings
Tracking	VP track	1	Needed	Not created	Can be built in TTS or added to a future board
Rules	Current game reference	1	Supplied	Generated as rules/CURRENT_GAME_REFERENCE.md	All-in-one rules and data reference
Rules	Current game reference PDF	1	Supplied	Generated as rules/current_game_reference.pdf	Public TTS-ready rules PDF with live data appendices

Utility Tokens

	Token ID	Name	Effect
	---	---	---
	U_COMBAT	Extra Combat	Perform 1 combat action
	U_MOVE	Extra Move	Perform 4 move actions
	U_COLONIZE	Extra Colonize	Perform 1 colonize action
	U_BUILD	Build 2 Interceptors	Build 2 interceptors
	U_SWAP	Swap Objectives	Swap the active objective with any other face-up objective; the swapped-in card scores this round

System Tokens

	Token ID	Name	Icon	Effect Type	Value	Description
	---	---	---	---	---	---
	TOKEN_VP_1	Minor VP	VP	passive	1	Gain 1 VP at end of round
	TOKEN_VP_3	Nexus Core	VP	passive	3	Gain 3 VP at end of round
	TOKEN_COMBAT_1	Combat Boost	ATTACK	trigger	1	Add +1 die to one combat
	TOKEN_MOVE	Engine Boost	MOVE	trigger	2	Gain +2 move actions when taking a move action
	TOKEN_COLONIZE	Colonize Boost	COLONIZE	trigger	1	Add +1 cube to colonize
	TOKEN_INTERCEPTOR_BAY	Interceptor Bay	INTERCEPTOR	trigger	1	Gain 1 interceptor when taking a build action
	TOKEN_REROLL	Tactical Reroll	REROLL	trigger	1	Reroll any number of combat dice once
	TOKEN_ACTION_PAWN	Extra Action Pawn	ACTION	active	1	Have 1 extra action pawn
	TOKEN_ASTEROID	Asteroid Terrain	ASTEROID	terrain	0	No token effect; ships here may not use retreat die
	TOKEN_NONE	No Token	NONE	none	0	No token

Objective Deck

	ID	Tier	Name	Card Text	Scoring Type	Params
	---	---	---	---	---	---
1	early	Frontier Dominion	Gain 1 VP per planet you have dominion over	per_planet_dominion	1	
2	early	Sector Presence	Gain 1 VP per sector where you have at least 1 ship	per_sector_with_ships	1	
3	early	Green Harvest	Gain 1 VP per green planet you have dominion over	per_planet_rarity_dominion	green:1	
4	early	Forward Fleet	Gain 1 VP per sector where you have 2+ ships	per_sector_ship_threshold	2:1	
13	early	Planetfall	Gain 1 VP per planet where you have presence	per_planet_presence	1	
16	early	Void Survey	Gain 1 VP per asteroid or blank sector where you hold the flag	per_sector_flag	asteroid\blank:1	
	NEW_E1	early	Flagbearer	Gain 1 VP per sector flag you currently hold	per_flag_held	1
5	mid	System Control	Gain 2 VP per system where you have dominion on the planet and all moons	per_full_system_dominion	2	
6	mid	Fleet Stronghold	Gain 2 VP if your largest sector has 4+ ships; 5 VP instead if it has 6+ ships	largest_sector_threshold	4:2\6:5	
7	mid	Core Focus	Gain 4 VP if you have dominion over the purple planet	per_planet_rarity_dominion	purple:4	
14	mid	Wide Footprint	Gain 2 VP if you have presence on 3 planets; 5 VP if present on 5+ planets	planet_presence_threshold	3:2\5:5	
17	mid	Belt Pressure	Gain 2 VP per asteroid sector where you hold the flag	per_sector_flag	asteroid:2	
	NEW_M1	mid	Chokehold	Gain 2 VP if you hold the flag on the blank sector; 5 VP instead if you also hold the CENTER flag	sector_flag_threshold	blank:2\blank+center:5

```
| NEW_M2 | mid | Border Raid | Gain 2 VP per enemy homeworld sector flag you hold | per_enemy_home_flag | 2 |

| System bonus cards | `cards/system_bonus_cards.png` | Width 4, height 2, number 8. |
| Combat dice textures | `dice/dice_standard_attack.png`, `dice/dice_spicy_attack.png`, `dice/dice_bombardment.png`,
```

```
`dice/dice_aggressive_defense.png`, `dice/dice_retreat.png` | Use each as a custom D6 image. |  
| Utility tokens | `tokens/utility_*.png` | Individual token images. Use 1 copy each. |  
| Ship silhouettes | `tokens/ship_token_*.png` | Individual token images. Use 12 interceptors, 8 settlers, and 8 destroyers per  
player. Health-2 ships also have `damaged` variants. |  
| Sector flags | `tokens/flag_*.png` | Individual token images. Use 15 copies per player. |  
| Rules PDF | `rules/current_game_reference.pdf` | Use as an in-table rules reference. |
```

Open Gaps And Future Hooks

Extra Ideas

Future Playtest Hooks

1. May need more combat actions if combat frequency is too low.
2. Ascension or instant-win card:
 - Each player may draw one at game start.
 - It sits next to its own action space.
 - If a player places a pawn there and meets the difficult prerequisite when it resolves, they win immediately.
3. VP bidding row:
 - Descending or ascending bid spaces.
 - Players bid VP for an event, special card, or rotating round bonus.
 - Highest bid wins and pays VP.

Additional Notes

- Consider a future variant where building can happen outside the home sector even without an Outpost cube.
- Track whether swap-objective utility is sufficiently interactive or needs a stronger timing window.
- Homeworld system bonuses are not yet defined. `TOKEN\_BUILD` is archived and may be a candidate for homeworld or new systems.

Open Board and System Gaps

1. Planet slot counts are currently derived from legacy planet values as an experiment.
 - Suggestion: after one or two playtests, decide whether each planet should have bespoke slots instead. Planets no longer have end-game VP, so slots now matter primarily for dominion and system token access.
2. Homeworld system bonuses are not yet defined.
 - Suggestion: decide on homeworld system bonuses for a future version. `TOKEN\_BUILD` is a candidate. Players start with 1 cube on their homeworld planet and earn 2 VP at end game for maintaining dominion.
3. Asteroid sectors prevent retreat but have no other mechanical effect beyond objective hooks.
 - Suggestion: after playtesting, decide whether asteroids should grant additional effects such as combat dice or cover.
4. `TOKEN\_ASTEROID`, `TOKEN\_NONE`, `TOKEN\_MOVE`, `TOKEN\_COLONIZE`, `TOKEN\_INTERCEPTOR\_BAY`, and `TOKEN\_REROLL` remain in data because the map and token files reference them.
 - Suggestion: normalize token IDs after the next pass so the map and token file use exactly one naming convention.
5. Several system token effects are not fully automated yet.
 - Suggestion: implement timing hooks for ATTACK, COLONIZE, and ACTION once token timing is stable.

6. Outpost cube displacement via colonization needs playtesting.

- Suggestion: track whether the 2-colonize displacement cost feels appropriately difficult or too easy to achieve given colonize bonus stacking.

7. Full surfaces cannot always be claimed immediately by colonization. A player must first spend colonize value to remove enemy cubes or outposts, then spend additional value to place their own cube.

- Suggestion: watch whether this creates interesting siege play or slows the board too much.

8. Sector flag VP has not been playtested yet.

- Suggestion: track whether homeworld flags at 4 VP feel like a sufficient deterrent against early rushing, and whether non-planetary sector flags at 2-3 VP create enough incentive to contest corridors.

9. Objective pool has 21 cards across 3 tiers; only 9 score per game.

- Suggestion: after playtesting, trim or adjust tiers based on which cards feel underpowered or redundant. Border Raid and Homeworld Hunter overlap thematically, so monitor whether both are needed.
